Professional Summary

Front-End and Full-Stack Developer with hands-on experience building responsive web applications using React.js, Next.js, TypeScript, Redux Toolkit, Node.js, Express.js, and MongoDB. Developed multiple projects including e-commerce platforms, blog systems, bookstore applications, and backend APIs.

Skills

Frontend Development

HTML5, CSS3, JavaScript (ES6+)
React.js
React Hooks
Next.js
Next.js App Router
Redux Toolkit
Responsive Web Design
UI Development

Backend Development

Node.js
Express.js
RESTful APIs
Authentication (JWT)

Database

MongoDB
Mongoose ODM
Postgres

Programming Languages

JavaScript (ES6+)
C++
Object-Oriented Programming (OOP)

Core Concepts

Object-Oriented Programming (OOP)
Problem Solving
Data Structures & Algorithms (Basic)

Tools & Technologies

Git & GitHub
Postman
npm
Vercel Deployment
Cloudinary

Project Impact

Reduced API response time by 30%
Built scalable REST APIs serving 1000+ requests/day

Professional Backend Architecture

MVC Pattern
Clean Architecture
Middleware Design

DevOps Basics

Vercel / Netlify
Environment Variables
Deployment workflow

Testing (Missing)

Unit Testing (Jest)
Integration Testing

Other Skills

Debugging
Clean Code Practices
API Integration

Projects

E-Commerce Shopping Platform

E-Commerce Management Platform | Full-Stack Application

Developed a scalable full-stack e-commerce platform featuring secure authentication, role-based authorization, protected routes, product management, shopping cart functionality, order processing, and an administrative dashboard.

Key Features:

- Implemented JWT-based authentication and role-based access control (RBAC)
- Secured application routes and protected dashboard access using middleware authorization
- Developed a complete product management system (Create, Update, Delete, View)
- Built shopping cart and order management workflows
- Designed and implemented user profile management and account updates
- Integrated RESTful APIs for frontend-backend communication
- Created responsive and user-friendly interfaces optimized for multiple devices
- Structured backend architecture following scalable development practices

Tech Stack:

Next.js, React.js, TypeScript, Node.js, Express.js, MongoDB, Mongoose, JWT, Tailwind CSS, REST APIs

[GitHub Repository](#)

[Live Demo](#)

Blog Application

Designed and developed a full-stack blogging platform allowing users to publish, edit,

and manage articles through a responsive and user-friendly interface.

Implemented

authentication, content management features, RESTful APIs, and database integration

using modern JavaScript technologies.

Tech Stack: React.js, Node.js, Express.js, MongoDB, Mongoose, JWT, Tailwind CSS, REST APIs

[GitHub Repository](#)

Book Store Application

Developed a scalable online bookstore application that enables users to browse, search, and purchase books through an intuitive and responsive interface. Implemented secure authentication, dynamic product management, shopping cart functionality, and order processing workflows. Designed reusable UI components and optimized data fetching to enhance performance and user experience across desktop and

[GitHub Repository](#)

Shopping & Social Media Platform

This project is a **full-stack hybrid web application** that combines the functionalities of an **e-commerce system** and a **social media platform** into a single unified experience.

The platform allows users not only to browse and purchase products, but also to interact socially through posts, likes, comments, and user profiles, creating a **social commerce environment** similar to modern platforms like Instagram

Technologies (based on typical structure)

Frontend: JavaScript / React (or similar)

Backend: Node.js / Express (if implemented)

Database: MongoDB

RESTful API architecture

[GitHub Repository](#)

Backend Development Project

This repository represents a **backend server built for full-stack web applications**, designed to handle core business logic, authentication, and data management for applications such as e-commerce and social platforms.

The backend follows a **RESTful API architecture**, enabling seamless communication between the frontend and database.

Node.js

Express.js
MongoDB or SQL database
JWT for authentication
Middleware-based request handling

Professional Developer Portfolio

This project is a personal developer portfolio application built to present your skills, experience, and projects in a structured and visually engaging way. It serves as a centralized profile that highlights your background, technical stack, and GitHub projects, making it easier for recruiters and employers to evaluate your work.

The application typically includes sections such as:
